

HELPFUL SNOW PLOWING/SHOVELING INFORMATION

1. Our crews do not intentionally plow in your driveway. In most storm events we make several passes to open up the street and come back later to clean to the curb or edge of road. If possible, delay the cleaning of the end of your driveway until the plows have completely cleared your street.
2. When shoveling or plowing your driveways place the snow to the right as you face the road from your home. Our plows come from the left and any snow placed to the left of your driveway will be pushed across the front of your driveway as the plows pass.
3. Do not park cars on municipal roadways when snow is in the forecast. Borough Ordinance prohibits parking cars on roadways when roads are snow covered. Cars left on the roadway force plows to maneuver around them, slowing down plow operations and resulting in piles of snow being left on the roadway.
4. Do not place snow in the roadways. Placement of snow from sidewalks, driveways and/or parking lots onto public roadways is prohibited by Borough Ordinance and makes plowing and cleanup by Borough forces more difficult.
5. Borough Ordinance requires that homeowners clear their sidewalks of snow and ice within eight (8) hours of daylight after the snow has fallen or ice has formed and shall continue to maintain the sidewalk in a safe and passable condition. For ice control, avoid using salt as this tends to damage concrete. Instead treat icy sidewalks with a product containing calcium chloride. Sand can also be used to increase traction.
